[aiming at]

performing the architectural design of a recycling center located in a specific urban pattern from the conceptual discussions regarding its own place to the material decisions on its structural details

[more on design problem]

The students are expected to design a recycling center which is supposed to integrate with a particular urban pattern. The study starts with analyzing the given urban context. Even though the analysis process covers some urban and spatial analyses aiming at unfolding existing functions, building heights, solid and void relationships, the students are going to be encouraged to discover their own understanding ways peculiar to that place.
