

well-being centre_

a sustainable and inclusive centre
for physical and spiritual health

The last four years marked a period that accelerated issues of health and well-being. As in all other disciplines, a lot of thought has been given to health in the field of architecture where the existing 'norms' have been reconsidered. Ecological, political and social aspects are just as crucial when considering health. Ecological crises such as climate and pollution; socio-political aspects such as urbanization and poverty are the dominant elements that give way to poor health. Students of ARC0006 are expected to emphasize keywords such as “sustainability”, “inclusivity” and “digitalization” in overcoming issues of health.

Instructors_

Assoc. Prof. Dr. Evren Burak Enginöz

Assist. Prof. Dr. Z. Ayşe Gökşin

Assoc. Prof. Dr. Pınar Arabacıoğlu (YTÜ)

Res. Assist. İdil Akkuzu
