TOPOGRAPHY OF CURIOSITY

The **2022-23 Spring** Term Graduation Project aims to produce a **topography** that will host a polyphonic platform for providing an environment of **safe keeping, displaying, commemorating, re-encountering and questioning** in the past-future spectrum, in the founding century of the Turkish Republic.

The modernization process brought by the spirit of the **Turkish Republic** at the **social, cultural, and political** levels is manifested in the theme of **'topography of curiosity as a space of liberation'** that includes social and cultural activities such as discussion platforms-knowledge production-exhibition-installation. In the project, the **topography of curiosity** will be discussed together with the **100th anniversary of the Republic**, and students are expected to conceptualize and develop the subject in line with the proposed program.
