## Science and Experiment Center in Bakırköy

Site location: MÜSİAD

Within the scope of ARC0005 Architectural Design course in 2019-2020 fall semester, students are asked to design a Science and Experiment Center. With the Science and Experiment Center project, it is aimed that children of primary and high school age can conduct various scientific experiments and researches in their real environment, contribute to their academic education by learning while experiencing, and participate in the exciting world of science with fun and instructive time as well as children.

Within the context of the Bakırköy Science and Experiment Center project, they are expected to realize a design including multi-purpose meeting and seminar halls where educational and informative meetings are held, experiential science and exhibition halls, laboratories, workshops and observation spaces, and open, semi-open activity areas connected with these spaces.
